Die oben unter 7. genannten Mischungen eignen sich bevorzugt zur Verwendung in Sonnenblumenkulturen zur Bekämpfung von Vol. barley; Vol. wheat; Avena spp.; Cyperus spp.; Digitaria spp.; Echinochloa spp.; Setaria spp.; Sorghum spp.; Abutilon spp.; Amaranthus spp.; Chenopodium spp.; Ipomea spp.; Polygonum spp.; Xanthium spp.; Ambrosia spp.; Anoda cristata; Asclepias spp.; Datura ferox; Portulaca oleracea und Solanum spp.

Die Aufwandmenge kann innerhalb weiter Bereiche variieren und hängt von der Beschaffenheit des Bodens, der Art der Anwendung (pre- oder postemergent; Saatbeizung; Anwendung in der Saatzfurche; no tillage Anwendung etc.), der Kulturpflanze, dem zu bekämpfenden Unkraut, den jeweils vorherrschenden klimatischen Verhältnissen und anderen durch Anwendungsart, Anwendungszeitpunkt und Zielkultur bestimmten Faktoren ab.

Die Gemische der Verbindung der Formel I mit den Verbindungen der Formeln II, können in unveränderter Form, d. h. wie sie in der Synthese anfallen, eingesetzt werden. Vorzugsweise verarbeitet man sie aber auf übliche Weise mit den in der Formulierungstechnik gebräuchlichen Hilfsmitteln, wie Lösungsmittel, feste Träger oder Tenside, z. B. zu emulgierbaren Konzentraten, direkt versprühbaren oder verdünnbaren Lösungen, verdünnten Emulsionen, Spritzpulvern, löslichen Pulvern, Stäubemitteln, Granulaten oder Mikrokapseln. Die Anwendungsverfahren wie Versprühen, Vernebeln, Verstäuben, Benetzen, Verstreuen oder Gießen werden, gleich wie die Art der Mittel, den angestrebten Zielen und den gegebenen Verhältnissen entsprechend gewählt.

Die Formulierungen sowie gegebenenfalls ein oder mehrere feste oder flüssige Formulierungshilfsmittel enthaltenden Mittel, Zubereitungen oder Zusammensetzungen werden in an sich bekannter Weise hergestellt, z. B. durch inniges Vermischen und/oder Vermahlen der Wirkstoffe mit den Formulierungshilfsmitteln wie z. B. Lösungsmittel oder festen Trägerstoffe. Ferner können zusätzlich oberflächenaktive Verbindungen (Tenside) bei der Herstellung der Formulierungen verwendet werden.

Beispiele für Lösungsmittel und feste Trägerstoffe sind z. B. in der WO 97/34485 Seite 6 angegeben.

Als oberflächenaktive Verbindungen kommen je nach der Art des zu formulierenden Wirkstoffes der Formel I nichtionogene, kation- und/oder anionaktive Tenside und Tensidgemische mit guten Emulgier-, Dispergier- und Netz Eigenschaften in Betracht.

Beispiele für geeignete anionische, nichtionische und kationische Tenside sind beispielsweise in der WO 97/34485, Seiten 7 und 8 aufgezählt.

Ferner sind auch die in der Formulierungstechnik gebräuchlichen Tenside, die u. a. in "Mc Cutcheon's Detergents and Emulsifiers Annual" MC Publishing Corp., Ridgewood New Jersey, 1981, Stache, H., "Tensid-Taschenbuch", Carl Hanser Verlag, München/Wien, 1981 und M. und J. Ash, "Encyclopedia of Surfactants", Vol I-III, Chemical Publishing Co., New York, 1980-81 beschrieben sind, zur Herstellung der erfindungsgemäßen herbiziden Mittel geeignet.

Die herbiziden Formulierungen enthalten in der Regel 0,1 bis 99 Gew.-%, insbesondere 0,1 bis 95 Gew.-% Wirkstoffgemisch 1 bis 99,9 Gew.-% eines festen oder flüssigen Formulierungshilfsmittels und 0 bis 25 Gew.-%, insbesondere 0,1 bis 25 Gew.-% eines Tensides.

Während als Handelsware üblicherweise konzentrierte Mittel bevorzugt werden, verwendet der Endverbraucher in der Regel verdünnte Mittel. Die Mittel können auch weitere Zusätze wie Stabilisatoren z. B. gegebenenfalls epoxydierte Pflanzenöle (epoxydiertes Kokosnußöl, Rapsöl oder Sojaöl), Entschäumer, z. B. Silikonöl, Konservierungsmittel, Viskositätsregulatoren, Bindemittel, Haftmittel sowie Dünger oder andere Wirkstoffe enthalten. Insbesondere setzen sich bevorzugte Formulierungen folgendermaßen zusammen:

(% = Gewichtsprozent)

DE 198 34 629 A 1

Emulgierbare Konzentrate:

Aktives Wirkstoffgemisch: 1 bis 90%, vorzugsweise 5 bis 20%

oberflächenaktives Mittel: 1 bis 30%, vorzugsweise 10 bis 20%

flüssiges Trägermittel: 5 bis 94%, vorzugsweise 70 bis 85%

Stäube:

Aktives Wirkstoffgemisch: 0,1 bis 10%, vorzugsweise 0,1 bis 5%

festes Trägermittel: 99,9 bis 90%, vorzugsweise 99,9 bis 99%

Suspensions-Konzentrate:

Aktives Wirkstoffgemisch: 5 bis 75%, vorzugsweise 10 bis 50%

Wasser: 94 bis 24%, vorzugsweise 88 bis 30%

oberflächenaktives Mittel: 1 bis 40%, vorzugsweise 2 bis 30%

Benetzbare Pulver:

Aktives Wirkstoffgemisch: 0,5 bis 90%, vorzugsweise 1 bis 80%

oberflächenaktives Mittel: 0,5 bis 20%, vorzugsweise 1 bis 15%

festes Trägermaterial: 5 bis 95%, vorzugsweise 15 bis 90%

Granulate:

Aktives Wirkstoffgemisch: 0,1 bis 30%, vorzugsweise 0,1 bis 15%

festes Trägermittel: 99,5 bis 70%, vorzugsweise 97 bis 85%.

Die folgenden Beispiele erläutern die Erfindung weiter, ohne sie zu beschränken.

F1. Emulsionskonzentrate

	a)	b)	c)	d)
Wirkstoffgemisch	5 %	10 %	25 %	50 %
Ca-Dodecylbenzolsulfonat	6 %	8 %	6 %	8 %
Ricinusöl-polyglykolether	4 %	-	4 %	4 %
(36 Mol EO)				
Octylphenol-polyglykolether	-	4 %	-	2 %
(7-8 Mol EO)				
Cyclohexanon	-	-	10 %	20 %
Arom. Kohlenwasserstoff-	85 %	78 %	55 %	16 %
gemisch C ₉ -C ₁₂				

Aus solchen Konzentraten können durch Verdünnung mit Wasser Emulsionen jeder gewünschten Konzentration hergestellt werden.

F2. Lösungen

	a)	b)	c)	d)
Wirkstoffgemisch	5 %	10 %	50 %	90 %
1-Methoxy-3-(3-methoxy-				
propoxy)-propan	-	20 %	20 %	-
Polyethylenglykol MG 400	20 %	10 %	-	-
N-Methyl-2-pyrrolidon	-	-	30 %	10 %
Arom. Kohlenwasserstoff-	75 %	60 %	-	-
gemisch C ₉ -C ₁₂				

Die Lösungen sind zur Anwendung in Form kleinster Tropfen geeignet.

DE 198 34 629 A 1

	<u>F3. Spritzpulver</u>	a)	b)	c)	d)
	Wirkstoffgemisch	5 %	25 %	50 %	80 %
5	Na-Ligninsulfonat	4 %	-	3 %	-
	Na-Laurylsulfat	2 %	3 %	-	4 %
10	Na-Diisobutyl-naphthalinsulfonat	-	6 %	5 %	6 %
	Octylphenol-polyglykoether (7-8 Mol EO)	-	1 %	2 %	-
15	Hochdisperse Kieselsäure	1 %	3 %	5 %	10 %
	Kaolin	88 %	62 %	35 %	-

Der Wirkstoff wird mit den Zusatzstoffen gut vermischt und in einer geeigneten Mühle gut vermahlen. Man erhält Spritzpulver, die sich mit Wasser zu Suspensionen jeder gewünschten Konzentration verdünnen lassen.

	<u>F4. Umhüllungs-Granulate</u>	a)	b)	c)
	Wirkstoffgemisch	0.1 %	5 %	15 %
25	Hochdisperse Kieselsäure	0.9 %	2 %	2 %
	Anorg. Trägermaterial	99.0 %	93 %	83 %
30	(\bar{A} E 0.1 - 1 mm)			
	wie z.B. CaCO_3 oder SiO_2			

Der Wirkstoff wird in Methylenchlorid gelöst, auf den Träger aufgesprüht und das Lösungsmittel anschließend im Vakuum abgedampft.

35	<u>F5. Umhüllungs-Granulate</u>	a)	b)	c)
	Wirkstoffgemisch	0.1 %	5 %	15 %
40	Polyethylenglykol MG 200	1.0 %	2 %	3 %
	Hochdisperse Kieselsäure	0.9 %	1 %	2 %
	Anorg. Trägermaterial	98.0 %	92 %	80 %
45	(\bar{A} E 0.1 - 1 mm)			
	wie z.B. CaCO_3 oder SiO_2			

Der fein gemahlene Wirkstoff wird in einem Mischer auf das mit Polyethylenglykol angefeuchtete Trägermaterial gleichmäßig aufgetragen. Auf diese Weise erhält man staubfreie Umhüllungs-Granulate.

	<u>F6. Extruder-Granulate</u>	a)	b)	c)	d)
	Wirkstoffgemisch	0.1 %	3 %	5 %	15 %
55	Na-Ligninsulfonat	1.5 %	2 %	3 %	4 %
	Carboxymethylcellulose	1.4 %	2 %	2 %	2 %
60	Kaolin	97.0 %	93 %	90 %	79 %

Der Wirkstoff wird mit den Zusatzstoffen vermischt, vermahlen und mit Wasser angefeuchtet. Dieses Gemisch wird extrudiert und anschließend im Luftstrom getrocknet.

65

DE 198 34 629 A 1

F7. Stäubemittel

	a)	b)	c)
Wirkstoffgemisch	0.1 %	1 %	5 %
Talkum	39.9 %	49 %	35 %
Kaolin	60.0 %	50 %	60 %

Man erhält anwendungsfertige Stäubemittel, indem der Wirkstoff mit den Trägerstoffen vermischt und auf einer geeigneten Mühle vermahlen wird.

F8. Suspensions-Konzentrate

	a)	b)	c)	d)
Wirkstoffgemisch	3 %	10 %	25 %	50 %
Ethylenglykol	5 %	5 %	5 %	5 %
Nonylphenol-polyglykolether	-	1 %	2 %	-
(15 Mol EO)				
Na-Ligninsulfonat	3 %	3 %	4 %	5 %
Carboxymethylcellulose	1 %	1 %	1 %	1 %
37%ige wäßrige Formaldehyd-	0.2 %	0.2 %	0.2 %	0.2 %
Lösung				
Silikonöl-Emulsion	0.8 %	0.8 %	0.8 %	0.8 %
Wasser	87 %	79 %	62 %	38 %

Der feingemahlene Wirkstoff wird mit den Zusatzstoffen innig vermischt. Man erhält so ein Suspensions-Konzentrat, aus welchem durch Verdünnen mit Wasser Suspensionen jeder gewünschten Konzentration hergestellt werden können.

Es ist oft praktischer, die Wirkstoffe einzeln zu formulieren und sie darin kurz vor dem Ausbringen in Applikator im gewünschten Mischungsverhältnis als "Tankmischung" im Wasser zusammenzubringen.

Beispiel B1

Pre-emergenter Versuch

Die Versuchspflanzen werden unter Gewächshausbedingungen in Töpfen angesät. Als Kultursubstrat wird eine Standarderde verwendet. In einem Voraufstadium werden die Herbizide sowohl allein als auch in Mischung auf die Bodenoberfläche appliziert. Die Aufwandmengen richten sich nach den unter Feld- oder Gewächshausbedingungen ermittelten optimalen Dosierungen. Die Auswertung der Versuche erfolgt nach 2 bis 4 Wochen (100% Wirkung = vollständig abgestorben; 0% Wirkung = keine phytotoxische Wirkung). Die in diesem Versuch verwendeten Mischungen zeigen gute Resultate.

Beispiel B2

Post-emergenter Versuch

Die Versuchspflanzen werden unter Gewächshausbedingungen in Töpfen bis zu einem Postapplikationsstadium angezogen. Als Kultursubstrat wird eine Standarderde verwendet. In einem Nachaufstadium werden die Herbizide sowohl allein als auch in Mischung auf die Testpflanzen appliziert. Die Aufwandmengen richten sich nach den unter Feld- oder Gewächshausbedingungen ermittelten optimalen Dosierungen. Die Auswertung der Versuche erfolgt nach 2 bis 4 Wochen (100% Wirkung = vollständig abgestorben; 0% Wirkung = keine phytotoxische Wirkung). Auch in diesem Versuch zeigten die verwendeten Wirkstoff-Kombinationen gute Resultate.

Patentansprüche

Herbizides Mittel, enthaltend neben üblichen inerten Formulierungshilfsmitteln als Wirkstoff eine Mischung aus

a) einer Verbindung ausgewählt aus der Gruppe I:

Pretilachlor, Cinosulfuron, Triasulfuron, Fenclorim, Clodinafop-propargyl, Metolachlor, S-Metolachlor, Fluometuron, Prometryn, Norflurazon, Propaquizafop, Trinexapac, Atrazine, Ametryn, Dicamba, Terbutryn, Prosulfuron, Norflurazon, Terbutylazine, Simazine, Prosulfuron, Primisulfuron, Oxasulfuron, Fluthiacet-methyl, Clodinafop, Cloquintocet-mexyl, Prometryn, Dimethachlor, und

b) einer oder mehrerer Verbindungen ausgewählt aus der Gruppe II:

Bensulfuron, Imazosulfuron, Pyrazosulfuron Metsulfuron, Azimsulfuron, Cyclosulfamuron, Esprocarb,
